

10

This technical proposal describes a Solaris IO. For supervisory control and data acquisition Leonardo 3.2 is included.

The system consists of fermenter/bioreactor (total volume), bench-top, pre-assembled unit, supplied with all necessary tubes, valves and instruments, automation, control panel (HMI).

The system is designed for aerobic and anaerobic cultivations/ fermentations, closed aseptic operations. IO is completely electrical. The thermoregulation (both heating and cooling) is performed through a Peltier Cell, placed on the bottom of the fermenter/bioreactor. This avoids water circulation (no water source is needed in the lab).

The control is based on a SCADA control system.

Multiple operations

up to 24 parallel units

Education

Basic Research

Scale up and scale-down studies

Applications

Small production

- Fully electric: no water circulation
- · Up to 24 units managed with one HMI with innovative PARALLEL process control

- borosilicate Single-wall vessel, with thermoregulation performed through a Peltier Cell
- Different configurations available for microbial and cell culture applications, with the choice of Rushton/Marine/Pitched-Blade impellers and fluted/L-shaped sparger

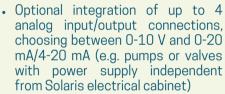

- · Modbus digital sensors reduce background noise and guarantee quick response time
- · Suitable for batch, fed-batch and continuous processes

• Powerful and accurate (1 RPM) brushless motor

- Extremely compact system maximizes lab space
- Additional parameter in modular external boxes for future PCS upgrade Including dCO2, cell density, weight, peristaltic pumps

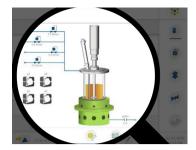

Leonardo

- Innovative SCADA software LEONARDO: a smart and userfriendly controller designed to provide a high level of automated management of the fermentation/cultivation processes
- Full version included in the equipment supply
- Up to 24 units managed in parallel with a unique HMI (24")
- Data extraction in .csv format
- Remote access via PC, tablet or smartphone, with QR code scanning or dedicated portal
- Remote control

Synoptic

- real time 3D view
- parallel control
- manual control

Remote Control

- unlimited number of profiles editor
- unlimited number of devices to be associated

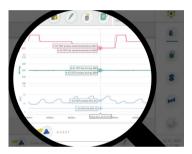

Workflow

- custom phase manager
- parallel visualization
- cascade settings
- peristaltic pumps function assignable from software

Logic Parser

- customized logic functions
- parallel logic blocks and funtions

Trends

- · custom acquisition time
- up to 6 values simultaneously display
- automatic graph comparison

Calibration

- up to three-point calibration
- simoultaneus calibration values for parallel work
